

Do you have Type 2 Diabetes And inject Lantus® insulin?

Are you willing to ... Consider another step?

A research study is being conducted at Research Institute of Dallas to evaluate the effect of taking an investigational medication or placebo along with Lantus® insulin on overall diabetes control, body weight, and quality of life.

You may qualify to participate if you:

- Are 18-75 years old
- Have an HbA1c of 7.0% to 10.5%
- Use Lantus® insulin without any other insulin
- Take diabetes pills or not

This is a 4½ month clinical research study involving 7 visits. All study-related care is provided at no cost to qualified participants, including: physical examinations, glucose meter and supplies, study medication or placebo, and laboratory tests.

Compensation for time and travel will be provided.

Please contact Terry of Research Institute of Research Institute of Dallas at **214.265.2145** for more information.
